

Fraud Trends 2025: Germany

Released in May, [Ravelin's Global Fraud Trends 2025 report](#) surveyed 1466 online fraud and payments professionals, compared the findings top last year and revealed three key trends:

- There's increased focus on money concerns this year, with revenue, budgets and financial fraud being key.
- The friction/security vs customer satisfaction question is timelier than ever – and merchants are still looking for the right answer.
- Merchants are having difficulty understanding, quantifying and blocking refund abuse.

Now, it's time to home in on Germany's results in particular, to better understand the fraud landscape in the country, how it differs from the rest of the world, and how we can better protect companies and customers.

Key takeaways

- 1 German merchants expect more fraud than their international peers – with **74%** expecting an increase in fraud in the future.
- 2 First-party abuse was ranked as more of a threat than professional fraud by Germans.
- 3 Friction identified as a top blocker to effective fraud detection – most prefer a balance between friction and smooth journeys.

Top consequences of fraud affecting German companies in the past year

1	Low customer satisfaction	43%
2	Loss of revenue/profit	42%
3	Low customer satisfaction and churn	36%
4	Operational costs	31%
5	Stolen employee PII or company data theft	30%

40% of German enterprises lose more than \$10 million to fraud every year
